Products

LPLUS System™

The LPLUS-System is an integrated software for extent automatized examination management. The entire process of the administrative preparation, the examination realization and the reworking is supported effectively. From entry tests and official final examinations up to the certification all tasks of knowledge control are controlled and managed. The software convinces through an intuitive user prompting, so even inexperienced user are enabled to quickly create complex examinations.

Behind the well known standard question types numerous very innovative question types are used. Complex question formulations are enriched problem-free vividly through the integration of multi-media objects and Office documents.

The different versions of the LPLUS system can be used as web based ASP solution as well as in LAN / Intranet networks.

Customer-oriented price fixing leads to fast amortization.

Fields of application

Professional examination

In fields with highest security claims, as official professional final examinations, that are organized often in decentralized form and run under high peak loads, the strengths of the LPLUS-System are proved. In some examinations the German IHK paper and pencil examinations are renounced already.

On-campus field

eExamination into mass courses of Universities makes quick results possible. In stead of waiting for month, students now are able to plan the further career immediately. All scientific disciplines are suitable for the electronic examination. The objectivity of the evaluation increases, the examination disposition is tightened.

Further education

Action-oriented questions are used in the Professional Further Education with pleasure. Whole training scenarios are created for the candidates, completed with especially produced videos and simulations. The LPLUS System supports this innovative type of examinations - independently of amount and complexity of your intention.

Aviation

In the aviation examination field the multilingual ability of the LPLUS Systems facilitates the Europe-wide use. LPLUS is competence partner of the Joint Aviation Authority for the maintenance of the central pilots examination database and controls the authorization checks of air traffic controllers following ESARR5 as well as in the future the certification in the PART 66 field.
